

Applying Lean
for Improved
Operational Health

Lean Healthcare Forum

Applying the principles of
Lean to the Healthcare Industry
is a win/win...for the patients and
the healthcare facilities. Learn
more at this powerful event!

PRODUCTIVITY

 rona consulting group

October 6-10, 2008 Gaylord Opryland Resort Nashville, TN

Healthcare is no longer simply about medicine and medical procedures; it is also about mobilizing and empowering all members of your organization and focusing them on building efficient, reliable healthcare processes that, first, do no harm; second, heal the sick; and third, achieve the company's financial objectives.

Lean Healthcare Forum

This Lean Healthcare Forum will feature healthcare organizations and industry leaders who have been successful in meeting the challenges of today's workplace. Learn how they are significantly reducing lead-times, increasing quality, improving patient care, achieving greater flexibility, improving staff and provider satisfaction, and producing a healthier bottom-line. Gain valuable insight into how they are dramatically changing their healthcare production environments, and turning employees into empowered associates fully committed to the change process. Join us in Nashville at the Lean Healthcare Forum, an international, peer-to-peer Lean learning event and learn how you too can build a Lean, patient-centered healthcare environment.

The Forum will include:

Keynote and Case Study Presentations—these sessions, by industry leaders and healthcare organizations will demonstrate how the techniques of Lean are working in today's leading organizations. Hear their stories, their course corrections, as well as their successes.

Workshops—these sessions cover the fundamental techniques of Lean...techniques you will need to master to make sustainable improvements in your organization over the long-term.

Special Sessions—these sessions offer you an opportunity to discuss the issues keeping you up at night. There are several opportunities, in small groups or individually, to speak to an expert or to learn how others in your industry have dealt with these same issues.

WORKSHOPS

Lean Healthcare Fundamentals

In this workshop, we'll explore the basics of achieving and sustaining enterprise-wide Lean in the healthcare industry. We'll review five rules of Lean DNA: 1) the standard work that governs all Lean activities, 2) the pathways of communication, 3) the flow of patients, material and information, 4) the scientific method that governs all changes to standard work, and 5) the Socratic method that guides Lean leaders.

Value Stream Mapping

This workshop will take you through a step-by-step method of value stream mapping and story boarding. You will learn how to gather the detailed information needed to eliminate non-value-adding processes, and how to use value stream management to plan the implementation of your Lean activities for sustained improvements over the long haul.

Visual Healthcare (5S+2)

This workshop will teach you how to document and share information systematically about daily healthcare production problems, abnormalities, waste, and unsafe conditions through visual display and controls so that everyone understands at a glance whether healthcare processes are in or out of control.

Standard Work

In healthcare operations, standard work is a key element in the elimination of waste, improvement of quality, providing better access to healthcare and in sustaining one's improvement efforts. Guided by a classroom simulation, participants will use a proven methodology to develop workplace standards, explore control measures, and learn how to train others in the new standard work.

How to Run a Kaizen Promotion Office

The Kaizen Promotion Office has proven to be an indispensable tool of successful Lean implementations. In this workshop, learn how to clearly define the roles of sponsors, process owners, team leaders, and team members, and how to conduct short weekly and monthly kaizen reviews that focus like a laser beam on the process improvements that are critical to patient safety and the bottom-line.

Lean in the Emergency Department

This simulation-based workshop demonstrates the flow of patients through the emergency room. Using Toyota's 7 Forms of Waste, improvements in patient and information flow are made at each stage of the simulation. This session will demonstrate many techniques you can use in your own facilities.

Strategic Planning and Project Management with the A3 System

In this workshop, we'll present a proven business renewal planning and deployment process that utilizes Toyota's famous A3 system of documentation and knowledge management. Learn how to incorporate your strategic priorities into daily work at every level in your healthcare organization.

Self-Directed Work Teams

In this interactive workshop, participants will receive a lively overview of the key elements necessary to create and sustain a self-directed, high performance work team. This workshop will look at the real-world business challenges facing organizations today, as well as give participants a specific implementation methodology to begin practicing upon immediate return to the workplace.
